Re: State Certification of the 2009 IECC

Dear Mr. Risser:

In accordance with the provisions of Section 304(C) of the Energy Conservation and Production Act (ECPA), as amended (42 U.S.C. 6831-6837), states are required to file certification statements to DOE by July 19, 2013 that they have reviewed the provisions of their building codes regarding energy efficiency and made a determination as to whether to update their code to meet or exceed the 2009 International Energy Conservation Code (IECC). A similar certification for the 2012 IECC is required by May 17, 2014.

The Texas State Energy Conservation Office (SECO), which has the statutory authority to adopt the latest energy codes in Texas, adopted the 2009 IECC effective April 1, 2011 for all commercial and residential buildings greater than three stories. Following the Determination Action List provided by DOE, prior to adoption the Energy Systems Laboratory (ESL) of Texas A&M University System reviewed the 2009 IECC to ensure the stringency of the new code was greater than that of the existing code. Upon receiving the technical review from ESL, SECO published a notice in the Texas Register requesting interested parties to submit written comment and a stakeholders meeting was held. After review and consideration of all comments ESL provided a written letter of recommendation to SECO and the decision was made to adopt the 2009 IECC.

Should you have any questions on this matter, please contact me at 512-463-8352.

Sincerely,

Dub Taylor, Director  
Texas State Energy Conservation Office
